## ABOUT ME

I am a Front-End Developer and UI/UX Designer focused on creating user-centered interfaces, working with modern web technologies and design systems. I build projects using React, Next.js, Figma, and animation libraries, prioritizing clean code, minimal design, and high performance. And I use AI very effective. I am currently a first-year Software Engineering student at Cyprus International University and the founder and president of the Teknofest Technology Club at my university, representing Turkey's largest technology festival. Additionally, I graduated from a high school specialized in IT and software as the second top student at my school.

## EXPERIENCE

Present	<div><b>Teknofest TRNC</b></div> <div>Education Mentor</div> <p>I mentor students by providing structured training in web development, UI/UX design, and graphic/logo design. I guide learners through the entire process—from understanding modern design principles to building functional, user-friendly web interfaces. I also share my own Teknofest experiences, helping students improve their problem-solving skills, develop competitive project ideas, and prepare effectively for national and international competitions. Through this role, I actively contribute to the growth of the local tech community while supporting young developers and designers in improving their technical and creative abilities.</p>
Present	<div><b>Teknofest CIU</b></div> <div>Founder &amp; President</div> <p>At Cyprus International University, I founded the Teknofest student community and built an active network focused on technology, software, and engineering projects. I continue to organize and oversee project teams in areas such as web development, AI, robotics, and design. I am actively managing competition preparation, project planning, training programs, and official coordination processes. Through this ongoing leadership role, I support the growth of young developers and strengthen the university's presence within the Teknofest ecosystem.</p>
2025	<div><b>Quiz Cyprus</b></div> <div>Teknofest Project (TR#4, TRNC 1#)</div> <p>This project was a web-based learning and quiz platform developed for Teknofest. In this project, I designed a clean, user-centered interface and built a modern front-end architecture using HTML, CSS, JS. I focused on creating an intuitive and responsive UI that delivers educational content quickly and clearly. I also led the project's presentation, documentation, and performance optimization processes, ensuring a polished and consistent product. As a result, our project achieved 4th place in Turkey and 1st place in the TRNC in its Teknofest category.</p>
2024 - 25	<div><b>Highschool Internship</b></div> <div>Baba Bilgisayar</div> <p>During my internship, I worked on hardware maintenance, basic repairs, and software installations. I gained hands-on experience in diagnosing issues, replacing components, and assisting customers with technical problems. I also handled tasks like operating system installation, driver updates, and performance optimization. This internship helped me strengthen my technical foundation and learn how to take responsibility in a real work environment.</p>

## EXPERTISE

Figma	React	PHP	C++
Canva	Next.js	Java	C#
Framer	Javascript	Phyton	Kotlin
Shopify	HTML	Typescript	Git
Wix	CSS	Dart	Jquery

## LANGUAGES

Turkish  
Russian  
English
